SafeZone Token Platform

Abstract :

Safe Zone Token is carrying the legacy of staking in cryptocurrency and staking is well explained here in the the sense of reward system .Indeed reward ,in itself a great intriguing and motivational thing to have an action.As it requires keeping funds in a cryptocurrency wallet to finance the authentication and activities of a blockchain network. Simply put, staking is the process of locking cryptocurrencies to collect incentives. In most cases, you'll be able to stake your coins directly from your crypto wallet,.

So Safe Zone Token is your Trust Token to carry, keep, stay and wait for real reward and indeed the reward will be increasing and will keep increasing as

Safezone Token itself elaborates that **“Keep SafeZone Tokens in Your Wallet, and keep Watching Your Balance increased.”**

Introduction:

Safe Zone Token aims for the ecosystem to evolve into a highly integrated ecosystem, that goes well beyond this launchpad and other traditional Defi products in the future. It is believed for the launchpad to attract new customers, companies, and apps to the web. It is said to have the potential of attracting millions of people.

Safe Zone Token is an open forum for the crypto culture and is very distinct from the others. This platform has key features including Live IDO, Premium Projects, piling, and NFT Marketplace with Launchpad. These additional platforms offered by Safe Zone Token would provide any user a more convenient experience on this platform than every other.

Safe Zone Token-EcoSystem:

Safe Zone Token will allow customers to access a wide host of decentralized launch protocols. Our launchpad aggregator will access smart contracts and allow customers to directly participate by a single click on our Platform. There will also be access for Safe Token holders to giving early access to incubated projects and portions of some aggregated pools.

- Public Sale.
- List on PancakeSwap and Liquidity Lock.
- List on Coinsbit/Probit
- Marketing.
- Update Bscscan.
- Update Logo Trustwallet.
- Website updated.
- List on CoinMarketCap, Coingecko, LiveCoinWatch.
- Listing on other Exchanges.
- Launch Trading Competition.
- Partnership

Safe Zone Token act as aggregators is one of the latest innovations in the burgeoning DeFi market that allows traders to tap deep liquidity and receive better pricing. Aggregators gather the best of the space into one dashboard and user interface.

It is interesting to note that DeFi aggregators have become very popular among active traders. They made up around 20% of decentralized trading volumes in mid-2020.

Safe Zone Token-Benefits:

SafeZone Token Platform

Benefits to Stakeholders:

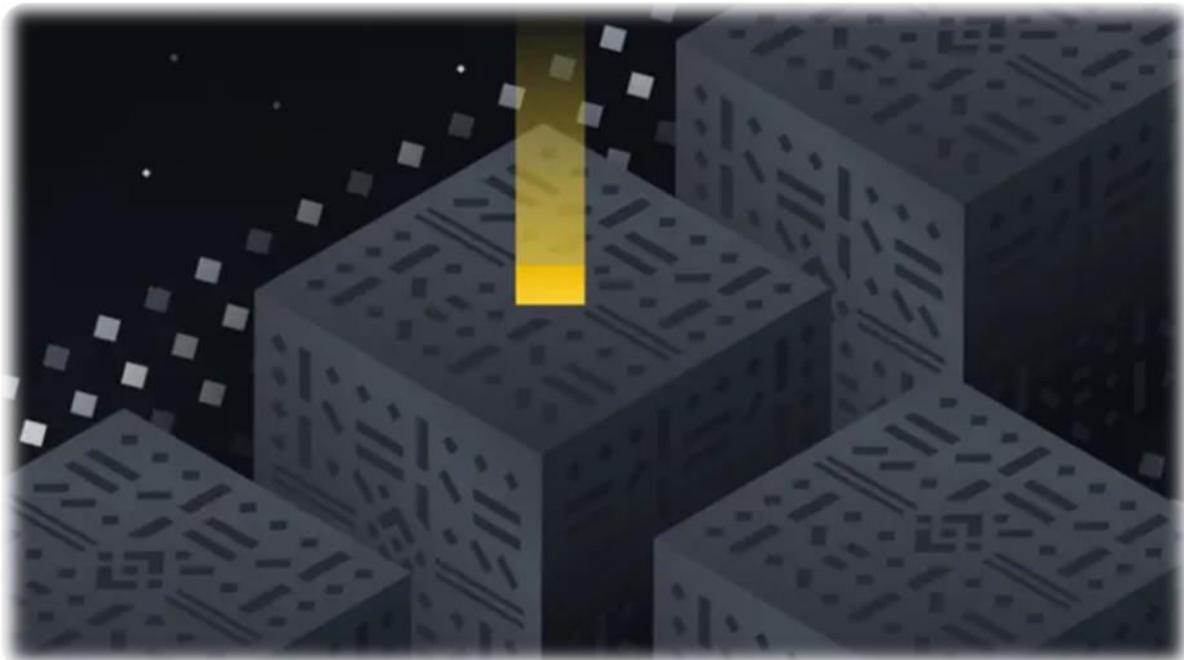

Safe Zone Token is with tons of benefits to stakeholders ,a few are mentioned here:

		
100% Community Driven	INSTANT STAKING	BIG HOLDER REWARDS
Community driven & fair launch. No Dev team tokens and participated in the fair launch with everyone else.	With the SafeZone token there is no need to stake or lock up your tokens anywhere to receive rewards. Just hold SafeZone tokens in your wallet and watch your balance increase	The SafeZone tokenomics apply a special tax to every buy or sell of the tokens. 3% are redistributed back to holders while 2% are burned forever reducing the total supply.

As Safe Zone Token is community driven provides a deeper pool of liquidity for traders who want to trade large amounts of digital tokens. Secondly, You will receive a better execution price using a Safe Zone Token .Aggregators are built to enable traders to fill trades at the best possible level across a range of liquidity pools. So for price-sensitive traders and investors, it makes sense to use a liquidity aggregator instead of only a single decentralized trading platform. Thirdly, in the same vein as “traditional” decentralized exchanges, Safe Zone Token aggregators add a layer of privacy to crypto trading that you cannot find on centralized exchanges. Finally, liquidity aggregators improve the decentralized trading experience as they provide user-friendly dashboards where a few clicks suffice to trade millions in digital tokens within seconds.

Security and Safeguarding by Safe Zone Token

As Safe Zone Token is powered by Binance Smart Chain #BSC which itself is a modern blockchain with a full-fledged environment for designing high-performance decentralised applications. It was designed for cross-chain compatibility with Binance Chain to ensure that consumers get the best of both worlds. Binance Chain was launched by Binance in April 2019. Its primary focus is to promote cheap, decentralised (or non-custodial) trading. Perhaps predictably, the biggest decentralised application (or DApp) on it is Binance DEX, one of the friendliest decentralised exchanges out there. You can access it with a web interface at binance.org or via its native integration with Trust Wallet.

Like any new crypto market segment, there is no shortage of bad actors looking to take advantage of both creators and users. Fraudsters can create duplicates of digital art tokens that can appear as originals to those who are less knowledgeable about them. The platform utilizes its ACNodes to solve this issue, ensuring any token accessed using the protocol API is verified to have been minted by the brand's authenticated agent or the artist that is being represented.

STACKING

By using the Safe Zone Token platform you can stake the coin and earn profit in the form of interest. Staking means you are holding your cryptocurrency funds in a wallet and thus support the functionality of a blockchain system. Stakeholders lock their cryptos in their wallets. In return, they are rewarded by the network. So, why would you stake your crypto assets? Staking cryptocurrencies offers several advantages. First, staking your assets through PoS avoids being diluted by inflation. Nonetheless, the value of your staked tokens can be affected by fluctuations in the currency price.

Furthermore, a significant benefit of staking digital assets is that it doesn't require expensive hardware, which makes it more accessible to a broad public. Thirdly, staking offers a quasi-guaranteed return and a predictable source of income when measured in tokens. Also, it is more environmentally friendly to invest in PoS because it doesn't require high amounts of energy, like with mining in PoW networks.

Tokenomics

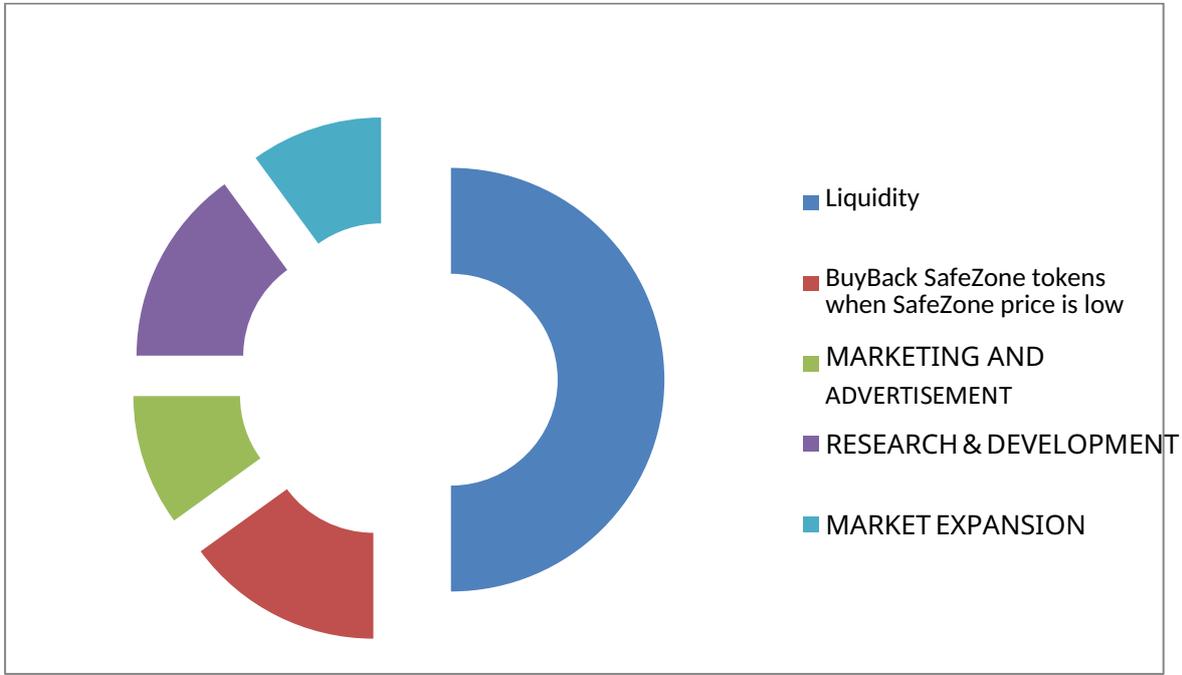

Token name: Safe Zone Token

Symbol: Safe Zone

TOTAL SUPPLY: 1000,000,000

PLATFORM: Binance Chain #BRC
